

Stef Deligia

Senior Data Analyst (SFIA 4)

Profile

An experienced Senior Data Analyst with 8+ years of expertise in designing, building, and maintaining scalable data solutions on cloud platforms, particularly AWS. Skilled in leading teams and managing complex data analysis projects using Agile methodologies. Expertise in using Azure Synapse Analytics, Amazon Redshift, Data Factory, Power BI, and Databricks to extract insights, build models, and deliver actionable data-driven outcomes that inform decision-making and enhance business performance.

Skills & experience

- Proficient in Azure Data Factory, Azure Synapse Analytics, Azure Databricks, and related Microsoft technologies.
- Advanced in SQL, Python, R, and C++; experienced with ETL, TensorFlow, Luigi, PySpark, and SQLSpark
- Skilled in Agile and PRINCE2 methodologies; adept at stakeholder management for large-scale projects.
- **Certifications:** Data Engineering on Microsoft Azure, ITIL Foundations, PRINCE2 Practitioner, and Databricks.
- Key Clients: PINS, HMCTS Edge Health

Career History

Solirius: Lead Data Analyst

September 2024 - Present

Leading the development and optimisation of data solutions for public sector clients, including HMCTS and the Planning Inspectorate (PINS), with a focus on enhancing data accessibility for analysis and reporting. Stef's responsibilities include:

- Designing and implementing efficient data pipelines to facilitate the extraction, transformation, and loading (ETL) of data into enterprise platforms, ensuring data quality and consistency for analytics.
- Ensuring accurate data transformations and applying data governance practices to support high-quality analytics and reporting, providing valuable insights for decision-making.
- Collaborating with stakeholders to improve data accessibility, streamlining workflows, and enhancing data-driven reporting capabilities across multiple projects.

Edge Health: Lead Data Engineer

June 2023 - September 2024

Led the design and implementation of end-to-end data solutions using Azure for healthcare clients, including NHS England, focusing on delivering actionable analytics and insights for patient-level data in theatre services.

- Developed data pipelines to support the efficient ingestion and transformation of patient-level data, ensuring data quality and consistency for healthcare analytics and reporting.
- Managed multiple concurrent projects, ensuring that data analysis deliverables aligned with Agile methodologies and adhered to project timelines.
- Partnered with stakeholders to provide valuable data-driven insights through statistical modeling and analytics, supporting decision-making for both public and private healthcare organisations.

Change Healthcare : Data Analyst

November 2023 - May 2023

- Delivered and implemented cloud-based enterprise solutions across 23 clinics in the UK, leveraging data to improve healthcare workflows and optimise operational efficiency.
- Analysed healthcare data to identify key process improvements, leading to a 15-minute reduction in average procedure times and a 25-minute reduction in coronary case times.
- Worked closely with teams to track and report on performance metrics, consistently delivering projects ahead of schedule and contributing to the team's top-performing revenue.

Change Healthcare: Data Analyst

November 2017 - November 2020

- Supported data-driven healthcare systems across 80+ customer facilities in the UK and Ireland, ensuring 24/7 uptime and optimal performance for critical healthcare applications.
- Utilised SQL databases and Linux CLI to manage and analyse system data, identifying and resolving performance bottlenecks and ensuring smooth operations for end-users.
- Monitored system performance, leveraging data insights to troubleshoot complex issues, providing actionable recommendations to improve system efficiency and maintain high service availability.
